The images generated by Eagle CTS are superior over traditional film positives:

- the process is cheaper, images are printed directly on the screen without using films
- images have better quality, greater details and superior halftones transition
- There's no need for a vacuum blanket during the exposure process as light does not have to penetrate layers of glass and film, with a time saving up to 50%
- You don't need to store all your screens. Just save the file digitally and reprint them when you need, saving space, manpower and inventory

The positioning system is easy allow the operator to print screens for multicolor images with far less registration requirement on press.

WhiteRIP software has a built in function to print the images one channel per time and to create the halftones transitions with great quality.

All you have to do is load the screen on the printer, open the image on the RIP and print it one channel per screen.

With the new Computer to Screen system **Eagle CTS** you will no longer need to print films and impress your screens.

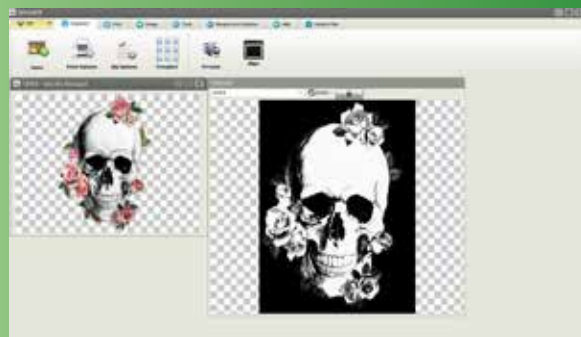

Everything you need to do is open your graphics in WhiteRip software (included), select the channel to print and your screen will be ready to print.

Thanks to a screen lock system it's easy to print different screens size one after another with minimum operation required for register setting.

TECHNICAL DATA:

- Print head : Piezo drop-on-demand , inkjet
- Resolution: min 360 x 360 / max 2880 x 1440 dpi
- Ink : in bottles (pressurised re-circulation)

SPECIFICS

- Print screens up to 600 x 1500mm
- Easy material loading thanks to the innovative WING design
- Easy screen load and lock system

RIP

Dedicated Software WhiteRip with specifics functions for screens creation

POWER

220-230 V 50 Hz

OPERATING ENVIROMENT

T°20-25°C , Humidity 40 – 80 %

CONSUMPTION

Lower than 0,6 KW
